Non-Surgical Scoliosis Treatment Offers New Hope

Fort Collins, CO, 6/3/2010 – The Spine Correction Center of the Rockies now offers a non-surgical treatment for scoliosis and disc disorders. This new non-invasive method is offering hope to hundreds who suffer from scoliosis.

Scoliosis is a medical condition where a person's spine is curved from side to side. This condition affects around 7 million people in the United States.

Scoliosis can cause pain, reduced lung capacity, pressure on the heart, and frustratingly restricted physical activity.

Typically, scoliosis is treated through expensive, difficult, and painful surgery. Believing there was a better way, Spine Correction Center of the Rockies received specialized training and certifications to correct scoliosis and other disc disorders non-surgically, and without the use of bracing.

This gives their scoliosis patients freedom from the ill effects of surgery, and freedom from the restrictions of bracing. Instead, patients receive relatively simple treatments at Spine Correction Center of the Rockies in Fort Collins, CO.

The Spine Correction Center of the Rockies is one of the very best in non-invasive, non-surgical treatment for scoliosis and disc disorders. Dr. Michael Farrell and April Cardwell are two of less than 2% of doctors trained and certified to non-surgically treat scoliosis by the CLEAR institute. Because of this rare training, doctors Farrell and Cardwell have treated local, national, and international scoliosis patients.

To learn more about this new scoliosis treatment, go to www.spinecorrectioncenter.com, call them directly at (970) 226-1117, or email them today at frontdesk@spinecorrectioncenter.com.
